

PASGT Combat Helmet

PASGT Combat Helmet, a US style military ballistic helmet, but with improved performance to weight characteristics

Available in standard weight or lightweight

This version of the widely adopted 'PASGT' ballistic helmet (the US Personal Armour System Ground Troops' protection system) uses the company's unique advanced processing techniques to provide enhanced shell protection, at lower weight, with an improved comfort factor.

Tetramid®, lower weight, same protection

Tetramid® composite armours were introduced after extensive development and trials. Tetramid® composite armour helmets are the most advanced lightweight helmets currently available.

Tetramid® composites provide NIJ Level IIIA ballistic protection with a 30% weight saving compared to other ballistic fibres such as Kevlar.

PASGT Helmet	Size	Weight
Standard	Medium	1350 grams
Standard	Large	1450 grams
Lightweight	Medium	1010 grams
Lightweight	Large	1165 grams

Designed and manufactured to the highest international quality control and construction standards, the Tetramid® helmet systems are tough, maintenance free and provide the maximum ballistic protection for the lowest weight.

Improved harness system

The improved harness system not only provides additional comfort, balance and relieves stress fatigue, but only uses 5 bolts as opposed to the normal 8 in the standard US version. The helmet harness also absorbs shock in excess of the standards laid down in EN 397.

Features:

- To fit head - 54 - 60 cm (M); 57 - 64 cm (L)
- Improved comfort
- Additional impact absorbing liner
- Bolt free harness
- 3 Point attachment with quick release buckles
- Communications compatible
- NVG compatible
- STANAG V50 F6 650m/s Protection
- NIJ IIIA Protection

The PASGT Combat Helmet is available in various colours to suit your operational requirements.
